Identifiers-*Educational Opportunities Survey, EOS

This report analyzes questionnaire item responses from the teacher questionnaire administered as part of the Educational Opportunities Survey (EOS). The analyses were conducted (1) to present the number and percent of teachers responding to each questionnaire item alternative, (2) to determine the number of teachers who failed to answer each question, (3) to serve as a guideline in developing codes to scale the items for future analyses, and (4) to serve as a guideline in estimating missing data. Most of the report is comprised of computer-processed data in tabular form. The study sample is made up of 36,241 elementary and 24,008 secondary teachers. (TT)

Item Response Analyses of the Educational Opportunities Survey Teacher Questionnaire*

Introduction and Purpose

The following report presents analyses of questionnaire item responses from the teacher questionnaire administered as part of the Educational Opportunities Survey (EOS). These analyses were conducted in order to: (1) present the number and percent of teachers responding to each questionnaire item alternative; (2) determine the number of teachers who failed to answer each question; (3) serve as a guideline in developing codes to scale the items for future analyses and; (4) serve as a guideline in estimating missing data.

Format and Tabulations

Table 1 shows the format for the tabulations presented in the main body of this report. The actual question used in the questionnaire is presented first along with the various response alternatives labeled (A), (B), (C) etc. The tabulations of the responses are presented first for ELEMENTARY and then for SECONDARY teachers. The two groups of teachers were selected on the basis of their response to a question concerned with the highest grade taught by them (question 59). Thus, those who said they taught the ninth grade or higher are included in the group of 9th to 12th grade teachers which has been labeled SECONDARY. Similarly, those who said they taught the eighth grade or less are included in the group of kindergarten through 8th grade teachers which has been labeled ELEMENTARY.

The column labeled CATEGORY contains the various response alternatives. Thus, category 1 refers to the first response alternative which is labeled (A). The arrows and curved lines in Table 1 attempt to show the appropriate categories for the various response alternatives. In addition, the number of persons who failed to respond (NR) to that item is indicated by the category numbered zero (0).

The column labeled NUMBER gives the number of persons in the sample who chose each response alternative (categories 1, 2 and 3) and those who failed to respond (category 0). The reader will note that there was a TOTAL of 36,241 ELEMENTARY and 24,008 SECONDARY teachers in the sample.

*The authors are indebted to Walter Davis of the Division of Data Processing and Analysis for his assistance in the computer analyses.

<u>ELEMENTARY</u>					
<u>CATEGORY</u>	<u>NUMBER</u>	<u>WEIGHTED NUMBER</u>	<u>WEIGHTED PERCENTAGE</u>	<u>MEAN</u>	<u>VERBAL STD. DEV.</u>
1 ←	XXXX	XXXX	XXXX	XXXX	XXXX
2 ←	XXXX	XXXX	XXXX	XXXX	XXXX
3 ←	XXXX	XXXX	XXXX	XXXX	XXXX
0 Non-response	XXXX	XXXX	XXXX	XXXX	XXXX
TOTAL	36,241	833,753	100.0	50.000	10.000

<u>SECONDARY</u>					
<u>CATEGORY</u>	<u>NUMBER</u>	<u>WEIGHTED NUMBER</u>	<u>WEIGHTED PERCENTAGE</u>	<u>MEAN</u>	<u>VERBAL STD. DEV.</u>
1 ←	XXXX	XXXX	XXXX	XXXX	XXXX
2 ←	XXXX	XXXX	XXXX	XXXX	XXXX
3 ←	XXXX	XXXX	XXXX	XXXX	XXXX
0 Non-response	XXXX	XXXX	XXXX	XXXX	XXXX
TOTAL	24,008	556,708	100.0	50.000	10.000

These values were then inflated using sampling weights so that they correspond to the number of elementary and secondary teachers. These values are given in the column labeled WEIGHTED NUMBER. The reader will note that there is an estimated TOTAL of 833,753 ELEMENTARY and 556,708 SECONDARY teachers.

The percent responding to each alternative was computed from these inflated numbers and is given in the column labeled WEIGHTED PERCENTAGE. These percentages sum to a TOTAL of 100 for ELEMENTARY and for SECONDARY teachers.

There were different sets of sampling weights used in the EOS study depending upon the particular population values that were to be reproduced. Thus, there are sets of sampling weights to reproduce student population values for the different grade levels and sets of weights to reproduce school population values. Since the teachers are part of the schools the school sampling weights were used to reproduce the population values for teachers.

The latter part of the teacher questionnaire consisted of a thirty item contextual vocabulary test. Of thirty possible items correct, the average was about 25 items correct with an approximate range from 16 to 27 correct. These scores were standardized to a mean of 50 and a standard deviation of 10. Using these standardized scores the mean and standard deviation for each item or question response alternative was computed. These computations are given in the column labeled VERBAL, MEAN and STD. DEV.

Consider question 1 in the main body of the report as an example. Of the total sample of 36,241 elementary teachers, 6,407 indicated they were male, 29,717 indicated they were female and 117 failed to respond to that question. Using the school sampling weights to inflate these values we note that there are an estimated 148,780 male and 682,573 female elementary teachers. In percentage values, 17.8 percent are male and 81.9 percent are female. Although the non-respondents for the first question represent only a fraction of a percentage (.3 percent) a great deal is learned about them by comparing their average (or mean) verbal scores and standard deviation with those who did respond. Thus, one can note that females have a slightly higher verbal score than males and their standard deviations are very similar. However, the non-respondents have a verbal score that is about 11 to 12 points below that for males and females and they are much more heterogeneous in terms of their verbal score as indicated by their standard deviation of 15. This large standard deviation indicates that there are diverse reasons for their failure to respond to this question. In view of their heterogeneity and small number, one might decide to exclude them from future analyses.

Due to present limitations of computer capacity only the first 66 of the total 72 questions were tabulated. The remainder of this report discusses some selected findings and presents the results of the analyses. Many of these results also appear in a different form in Chapter 2 of the report by Coleman and others entitled, "Equality of Educational Opportunity" (Coleman, 1966). The numbers and percentage response for each item alternative as well as the average verbal scores are presented here for the first time. The analyses represent part of a series of analyses being conducted as follow-on studies of the EOS data (see Weinfeld, 1967, and will result in the development of indices to be used in a wide variety of special studies.

Discussion of Some Selected Results

The occupation of the father is often used as an index of the child's socio-economic background. It is therefore of special interest to study responses to question 8 in terms of the percent of teachers whose father was a member of a particular occupational group and their average verbal score. These are presented in Table 2.

The rankings for percent of teachers whose father was employed in a particular occupation are very similar for elementary and secondary teachers. The greatest difference is in the percent of fathers who were farm or ranch managers or owners. About five percent more elementary than secondary teachers have fathers who were farm or ranch managers or owners. The three highest ranking occupations in terms of percent are for both groups of teachers: managers, skilled workers or foreman, and farm or ranch managers or owners. These three occupational groups include 54.9 percent of the elementary and 52.5 percent of the secondary teachers.

The rank orderings for teachers' average verbal score are almost identical for the elementary and secondary teachers. The three groups that are highest in verbal score for both groups are: official, professional, and salesman. This indicates that the relative level of verbal ability of teachers with fathers in these occupational backgrounds is not related to whether they are an elementary or a secondary teacher.

Father's Education

The average verbal scores for each item response alternative can also be used as a check on the codes to be used in scoring the items for ~~factor~~ analyses. Thus, for question 9, father's education, one might anticipate that those teachers whose parents had more education would have a higher average verbal score than those teachers whose parents had less education. Although this trend holds in general it is not a

Non-response	1.0	2	42.318	3	0.7	2	43.970	3

+ For each teacher group the overall mean is 50 and the standard deviation is 10.
See question 8 for the standard deviations for each occupation.

* Rankings are from high to low, hence a high score indicates a high value.

strictly linear trend. Thus, secondary teachers whose fathers had some college but less than four years have a slightly higher verbal score than those teachers whose father graduated from a regular four year college. Since departures from a linear trend are slight however, the investigator can have some confidence in scoring father's education incrementally with integers, say from one to eight and assigning the lowest integer to the persons who "Don't Know", or fail to respond.

There are too many tabulations to discuss each one individually; however, the reader may find many relationships in these analyses that are germane to his particular interests. The reader is cautioned not to attribute causation to the differences in achievement levels for the item responses. These differences may be due to many different interacting factors.

8. What work does (did) your father do? You probably will not find his exact job listed, but mark the answer space corresponding to the one that is closest.

- (A) Technical—such as draftsman, surveyor, medical or dental technician, etc.
- (B) Official—such as manufacturer, officer in a large company, banker, official or inspector, etc.
- (C) Manager—such as sales manager, store manager, office manager, factory supervisor, etc.
Proprietor or owner—such as owner of a small business, wholesaler, retailer, contractor, restaurant owner, etc.
- (D) Semiskilled worker—such as factory machine operator, bus or cab driver, meat cutter, etc.
Clerical worker—such as bankteller, bookkeeper, sales clerk, office clerk, mail carrier, messenger, etc.
Service worker—such as a barber, waiter, etc.
Protective worker—such as policeman, detective, sheriff, fireman, etc.
- (E) Salesman—such as real estate or insurance salesman, factory representative, etc.
- (F) Farm or ranch manager or owner
- (G) Farm worker on one or more than one farm
- (H) Workman or laborer—such as factory or mine worker, fisherman, filling station attendant, longshoreman, etc.
- (I) Professional—such as accountant, artist, clergyman, dentist, doctor, engineer, lawyer, librarian, scientist, college professor, social worker, etc.
- (J) Skilled worker or foreman—such as baker, carpenter, electrician, enlisted man in the armed forces, mechanic, plumber, plasterer, tailor, foreman in a factory or mine, etc.
- (K) Don't know

46. Below is a list of current school issues on which we want the judgments of teachers throughout the country. Please answer each in terms of your judgment of the best educational practice.

- a. Which of the following policies on neighborhood elementary schools represents the best educational practice, in your estimation?
- (A) Neighborhood elementary schools should be maintained regardless of any racial imbalance produced.
 - (B) Neighborhood elementary schools should be maintained, but where possible a device, such as reducing the grade span of schools, "pairing" schools, or another practice, should be used to promote racial balance.
 - (C) The idea of neighborhood elementary schools can be abandoned without significant loss.

53. On the average, how many students do you have per class this year? If you teach only one class, answer for that one. Write the number in the spaces at the top of the answer area. If the number is less than 100, put a 0 in the first space, then write the number; if the number is less than 10, put 0's in the first and second spaces, then write the number in the third space. Now blacken the spaces below the three numbers you have written which correspond to those numbers.
